SUMMARY

Computer Science undergraduate at SRM University AP passionate about building scalable full-stack applications. Experienced in developing backend systems using Node.js and Express, with hands-on work in REST API development, real-time systems, and cloud deployment. Focused on writing clean, efficient, and production-ready code.

WORK EXPERIENCE

Full Stack Developer Intern - CultureVo May 2025 - Sept 2025
Developed **Novi AI**, an emotionally intelligent **AI** platform with multiple personas and location-based bots, enhancing user engagement through personalized interactions.

- Developed scalable frontend using **Next.js** with **TypeScript**, implementing dynamic persona switching and location-based bot functionality.
- Architected **Supabase** database schemas for AI conversations, user profiles, and persona management, reducing query response times by **45%**.
- Implemented **RESTful APIs** and real-time chat features using **Next.js API routes** and **Supabase real-time subscriptions**.

PROJECTS

PRscribe GitHub
An automated **GitHub event processing system** using **GitHub Webhooks** for **real-time data** collection with **100% event accuracy**.

- Engineered **real-time event tracking frontend** using **Next.js** with **TypeScript** and **Google Gemini API**, increasing **user engagement** by **60%**.
- Designed scalable backend with **Express.js**, and **PostgreSQL (Prisma)**, optimizing for **40% faster queries**.
- Championed seamless user authorization leveraging **NextAuth**, achieving a **20% reduction in average login time** while enhancing **security protocols** for over **1,000 user accounts**.

Sync Space GitHub
A **real-time collaborative rich-text editor** built using **Next.js**, **Node.js**, **Express.js**, **Prisma**, and **Socket.io** with **CRDT-based synchronization**.

- Built a **multi-user collaborative editor** using **Tiptap**, **Yjs**, and **y-websocket**, enabling seamless real-time editing with conflict-free synchronization.
- Designed a **scalable backend architecture** with **room-based communication** using **Socket.io** for efficient collaboration.
- Implemented **persistent storage** using **PostgreSQL (Prisma)** to ensure reliable document saving and consistency.

Study Assistant GitHub
A **RAG-powered learning platform** built using **Flask**, **LangChain**, **FAISS**, **Groq API**, and **HuggingFace** for context-aware academic content generation.

- Implemented a **full-stack application** integrating **LangChain**, **FAISS**, and **Groq LLM API** to generate context-aware responses from uploaded study materials.
- Implemented **dynamic learning features** such as **flashcards**, **mnemonics**, and **simplified explanations**, improving conceptual clarity and active recall.
- Engineered a **semantic vector search pipeline** using **HuggingFace embeddings** and **FAISS**, enabling accurate retrieval from uploaded PDFs for reliable RAG responses.

EDUCATION

08/2023 - 05/2027 **BTech in Computer Science & Engineering** at **SRM University, AP** CGPA: 9.04

Programming Languages	C, C++, JavaScript, TypeScript
Web Technologies	HTML, CSS, Node.js, Express.js, React.js, Next.js, Tailwind CSS, GSAP
Databases	MongoDB, PostgreSQL
Version Control	Git, GitHub
Other Skills	WebSockets, API Development, Postman, Prisma ORM, MonoRepo & TurboRepo
HACKATHONS	

9Hacks - Winner - NextTechLab AP

- Won the hackathon** with **Code Paglu**, a real-time code collaboration platform featuring integrated video chat, messaging, and a collaborative code editor with live synchronization across multiple users in shared rooms.

- Implemented **real-time communication** using **LiveKit**, achieving sub-second media synchronization.
